Your Comments:

Too much of the river is left contaminated. Remove AT LEAST 1,000 acres of polluted sediment. The plan is not aggressive enough regarding treatment of dredged materials and riverbank contamination. Take the contaminants OUT of the river to an appropriate landfill. CDF is NOT acceptable.

MNR is NOT acceptable. Humans polluted this river; we cannot expect this pollution to "just go away." The plan must result in the removal of Fish Consumption Advisories so people can actually eat the fish native to the river.

Remedy the upland and upriver SOURCES of further pollution.

Comply with the Clean Water Act regarding drinking and surface water standards.

Institute independent air and water monitoring during cleanup.

Those who have liability for the PCBs, PAHs, DDT, dioxins/furans and other pollutants in the river sediments must meet their community obligations and do a comprehensive and timely cleanup.

Stand for restoration and conservation of this resource. Be remembered as positive guardians of our health, wildlife and environment. Do the right thing.
